**Caliper and Shaft Mount
 Brake Assemblies...
 GET 20% MORE TORQUE*
 "OUT OF THE BOX"
 A CDWdrives Service:
We burnish them before shipping**

A VALUABLE ENHANCEMENT

Caliper and shaft mount brakes usually need to be "run in." The "out of box" torque can be increased by up to 20% by burnishing the friction facings. If the brake is to be applied as a holding brake, or as an emergency stop or if maximum torque is required without "run in", we have the answer.

A CDW EXCLUSIVE!

CDWdrives provides this type of brake modified with dynamically burnished friction facing assemblies which produces a more predictable and consistent brake action. A better product.

STANDARD PRODUCTS ARE NOT THE SAME

Specify CDW part numbers and you will receive maximum brake torque capacity "out of the box." When emergency stops are crucial and when standard products do not meet your needs call CDWdrives.

* Validated by a 3rd party.

OUR PRODUCTS: TORQUE LIMITERS - COUPLINGS - CALIPER AND SHAFT MOUNT BRAKE ASSEMBLIES - GEAR REDUCERS AND MOTORS - ROTARY ACTUATORS - LINEAR ACTUATORS - BEARINGS - VARIABLE FREQUENCY DRIVE CONTROLS

OUR SERVICES: REPAIR, REBUILD, RETROFIT, REPLACE, REVERSE ENGINEER
