SCREW CONVEYORS

Product Improvements that Matter

A better way

Let Carlson-Diamond & Wright show you what you don't need...

Through the simplicity of design for gear motors and speed reducers, you eliminate many of the problems associated with outmoded methods. There is nothing to build - mountings, bases, guards. V-Belts are not required.

Now, that is an improvement!

Quik-Link conveyor screws

The Quik-Link conveyor screw is designed for easy removal from the conveyor trough. Each section of the screw is provided with a Quik-Link key located at one end of the pipe. By removing this key, a conveyor screw section coupling with hanger can be quickly and conveniently disassembled without disturbing other components.

Quik-Link conveyor screws are available for both helicoid flight and sectional flight construction.

Quik-Link is a functional improvement that makes your job easier
